1 | Your professional evidence

LEARN > PRACTICE > OPERATE > QUALIFY

Your portfolio holds semester artifacts, not a new final exam or second assignment. Existing points and settings remain unchanged.

Start with Monday's Blackboard lesson and Alex Morgan's live example. Alex is fictional. Open an artifact page, then Open full PDF or Download PDF.

Look for context, your action, evidence, validated result and reflection. Use one real artifact you authored; do not claim Alex's documents as your work.

Actual application capture, October 11, 2026. Substitute your own student account.

2 | Author in Word; publish PDF

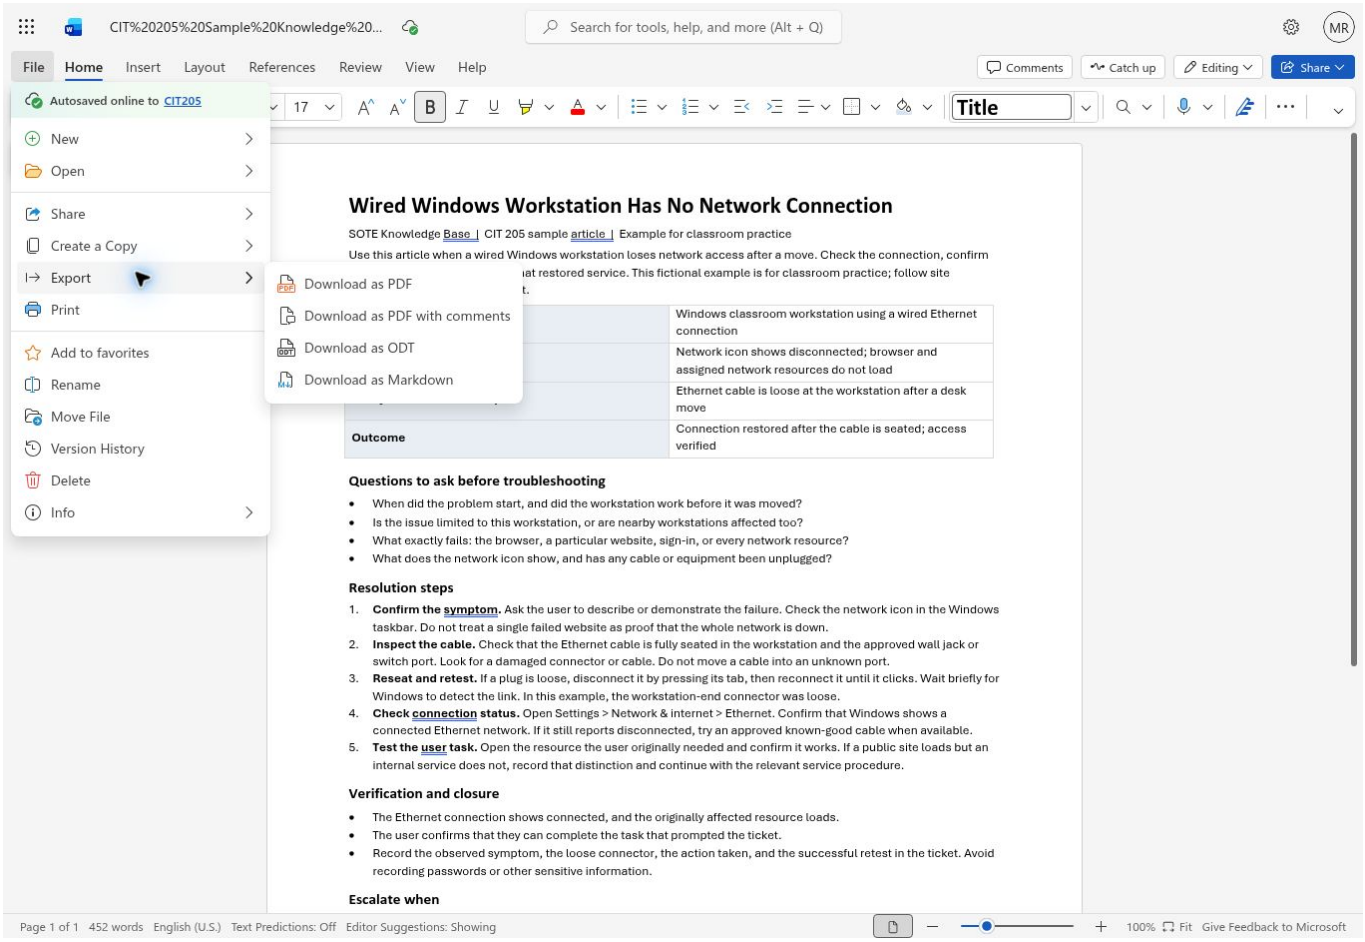

LEARN > PRACTICE > OPERATE > QUALIFY

Open Word and your existing CIT-205 Knowledge Article draft/template. Save a personal editable .docx copy in a known course folder.

Add title, author/date/version, purpose, symptoms, prerequisites and safety. Use Home > Styles > Heading 1/2, numbered procedures and an expected-versus-actual table. Add validation and escalation.

Proofread with available Review > Editor / Check Accessibility tools. Save Word source. Word for the web: **File > Export > Download as PDF**; desktop Word: Save As/Export > PDF.

Name it **knowledge-base-article.pdf**. Open every page; check tables, page breaks, readability and sensitive information. Redact in Word, export again and recheck. Word is for editing; PDF is public evidence.

Actual application capture, October 11, 2026. Substitute your own student account.

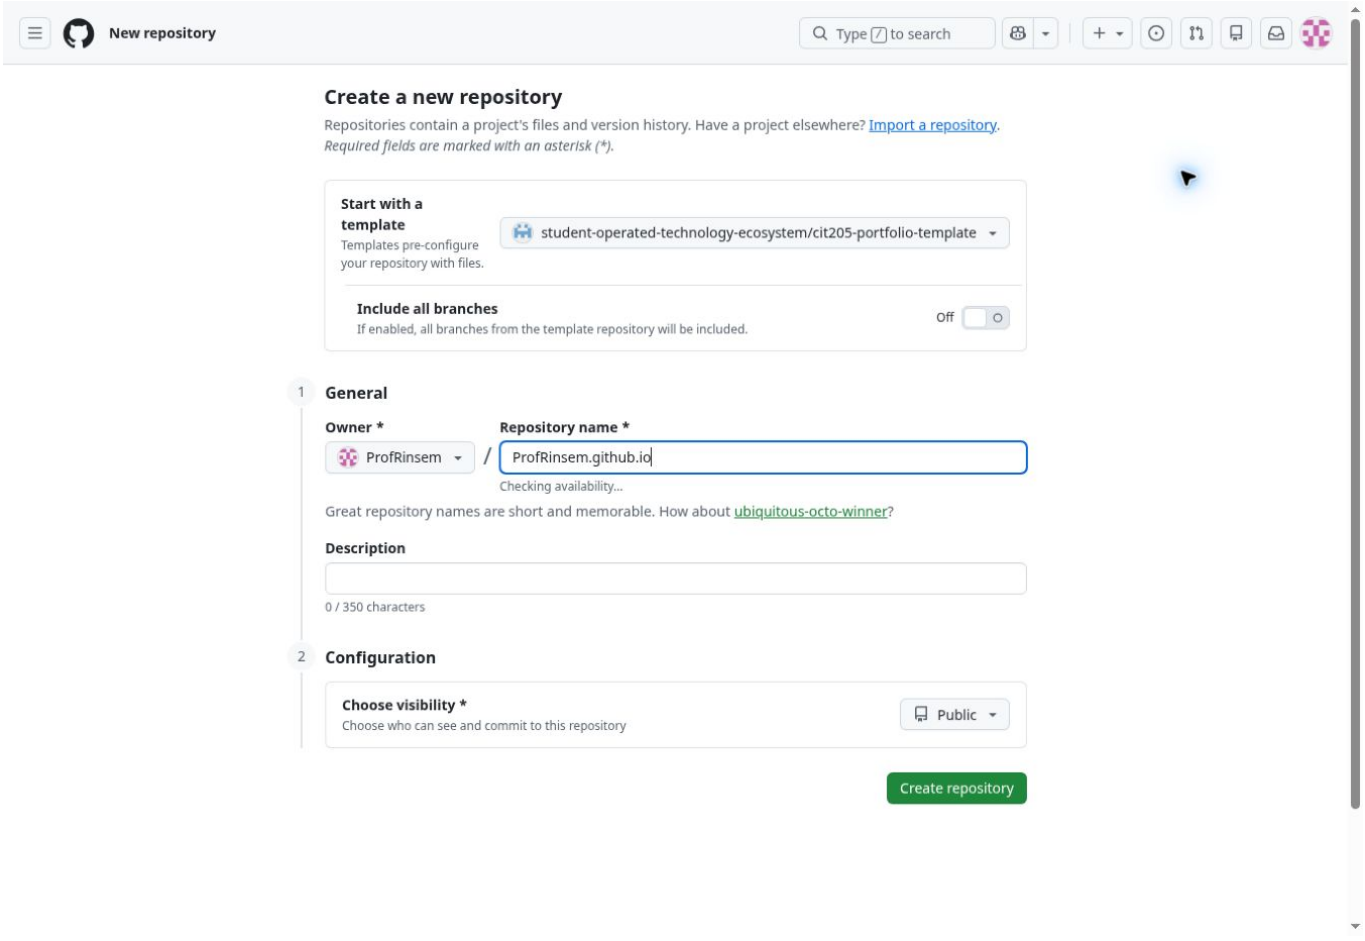

3 | Create your GitHub site

LEARN > PRACTICE > OPERATE > QUALIFY

Sign into GitHub. Open the actual portfolio template then Use this template / Create a new repository. Do not fork the classroom repository for this portfolio.

Owner: your personal account. Name: **USERNAME.github.io**, using your exact GitHub username. Visibility: Public. Leave Include all branches off. Select Create repository.

This real form shows the instructor account/name. Substitute your own. Already started? Keep and update your existing repository; do not duplicate or overwrite unrelated work.

Actual application capture, October 11, 2026. Substitute your own student account.

4 | Personalize and attach evidence

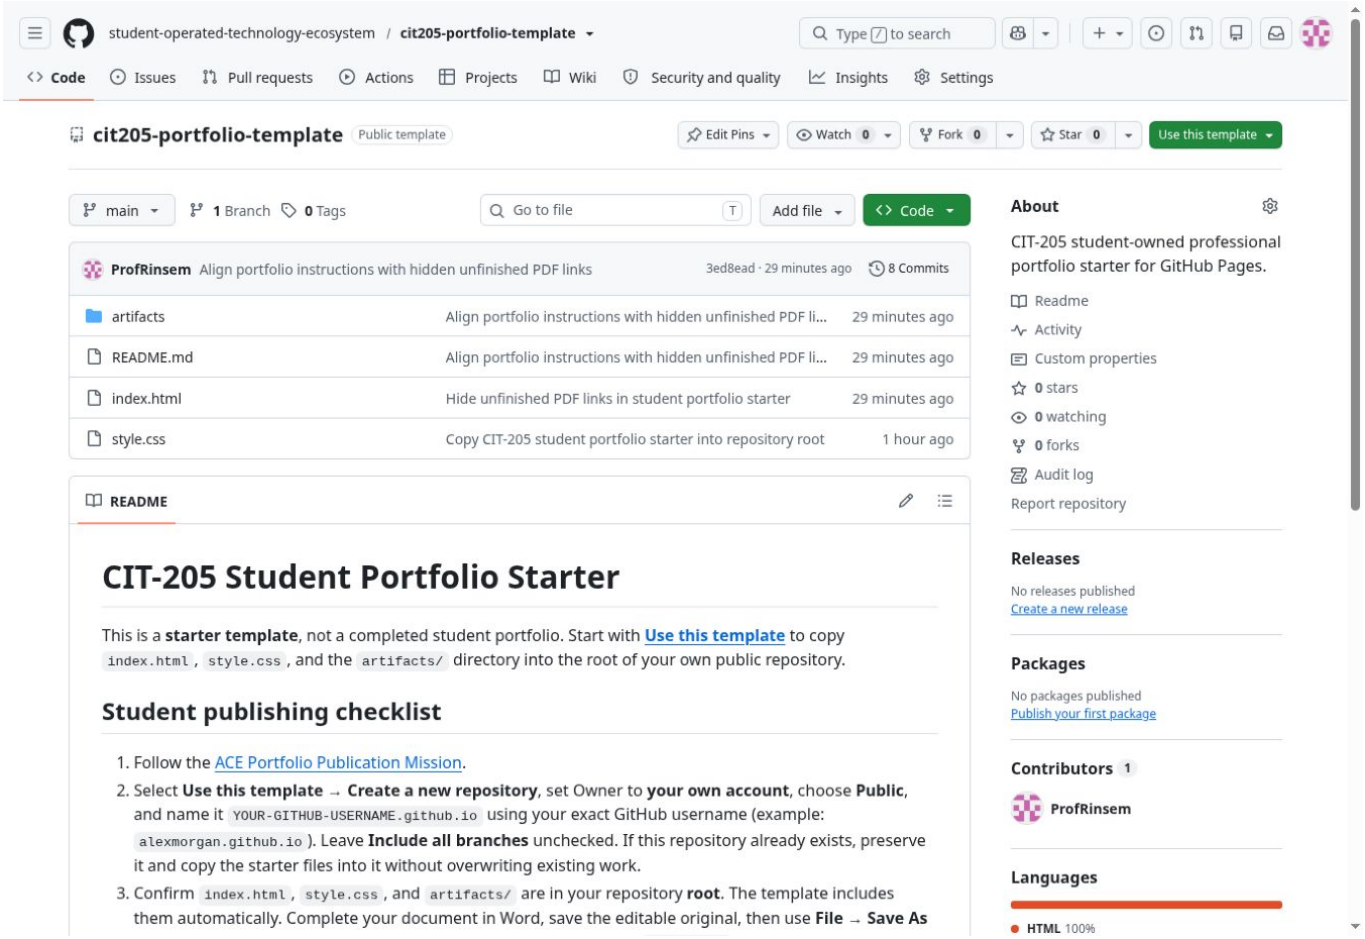

LEARN > PRACTICE > OPERATE > QUALIFY

index.html holds your homepage; style.css its appearance; artifacts/ your PDFs. Open index.html > pencil/Edit this file. Replace name, introduction, reflection and placeholder URLs. Commit meaningful changes to main.

Open **artifacts/ > Add file > Upload files**. Select knowledge-base-article.pdf; commit: Add reviewed knowledge base PDF.

Return to index.html. Find the Knowledge Base Article anchor; remove **hidden** only after the PDF exists. Keep **href="artifacts/knowledge-base-article.pdf"**. Commit: Link completed knowledge base evidence. Leave unfinished PDF links hidden.

Use the exact artifact filename guide. Folder, spelling, case and extension must match. Never link to a local Downloads folder.

Actual application capture, October 11, 2026. Substitute your own student account.

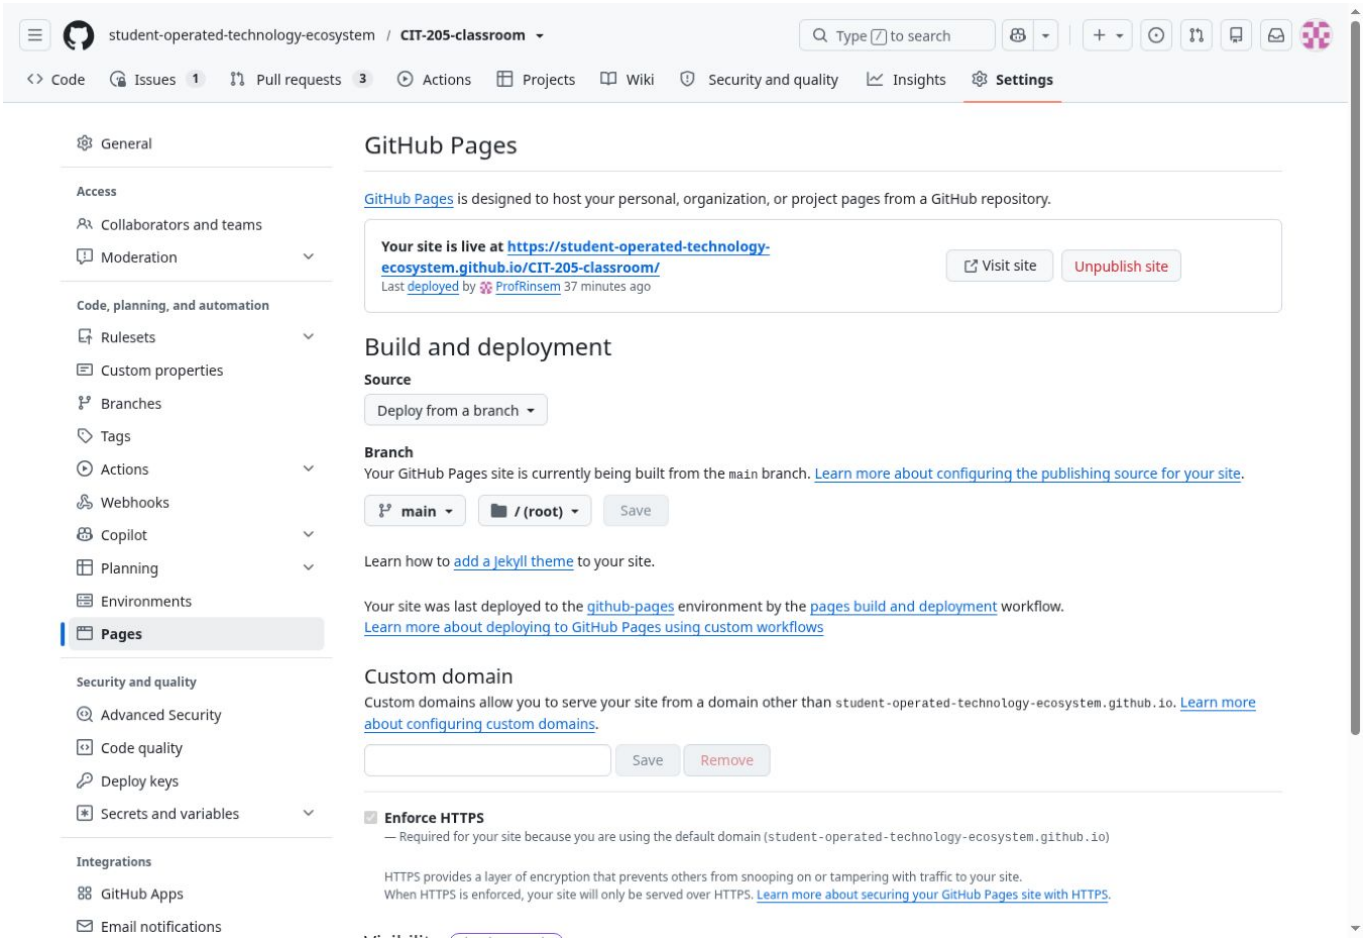

5 | Publish and prove it works

LEARN > PRACTICE > OPERATE > QUALIFY

In YOUR repository: **Settings > Pages > Deploy from a branch > main > /(root) > Save**. Wait for successful deployment. Screenshot shows the classroom already configured; do not change it.

Open **https://USERNAME.github.io/**. Future main commits republish automatically; wait for successful deployment before testing.

Test homepage, navigation and a real PDF on desktop and a phone, signed out. Check readable layout, no horizontal overflow, placeholders or private information. GitHub source view is not the published website.

Actual application capture, October 11, 2026. Substitute your own student account.

6 | Submit and troubleshoot

LEARN > PRACTICE > OPERATE > QUALIFY

Use the EXISTING DAY 14 publication assignment. Submit **live website URL + repository URL + direct working PDF URL + brief validation/reflection**. Confirm a real redacted PDF opens. Select Submit and check confirmation.

Homepage 404: exact USERNAME.github.io, root index.html, main/root Pages, committed files and successful deployment.

PDF 404: compare artifacts/, filename, capitalization and extension against href. Ensure upload and link edits are committed; no artifacts/artifacts/ nesting.

Old version: deployment success/current commit, refresh/private window. **Mobile issue:** preserve responsive starter CSS and test on an actual phone.

Sensitive information: stop sharing and notify the instructor. Deleting a file may leave git history. Never publish credentials, private records, real sensitive tickets or infrastructure details.

Partner qualification: truthful homepage; Word source retained; real PDF opens; Pages success; desktop/phone tested; all submission links provided. This guide adds no deadline.
