Documentation Vocabulary in Context

VOC-014

AUTHOR Alex Morgan (fictional) REVIEW Instructor demonstration STATUS Qualified: terminology correctly applied

Purpose and assessment context

A structured instructor-authored model for CIT-205. It illustrates how technical work becomes verifiable evidence. All incidents, measurements, approvals and names below are fabricated for teaching.

Purpose

Demonstrate support terminology through contextual statements rather than a disconnected memorization list.

Symptom

User-observable behavior: 'The browser reports that the training hostname cannot be found.'

Scope

Number of impacted people/assets: 'The first report involves one workstation; other devices remain unverified.'

Baseline

Documented expected state: 'The approved resolver should return the published training host.'

Reproduction

Repeatable series: 'The same lookup fails on two runs under the recorded conditions.'

Evidence

Observable record: 'The sanitized lookup log includes command, time, and resulting error.'

Workaround

Temporary restoration: 'A permitted alternative endpoint permits work to continue, but does not resolve root cause.'

Root cause

A confirmed mechanism supported by evidence, not a guess. If not confirmed, explicitly label it unconfirmed.

Escalation

Transfer when authority or expertise is exceeded, carrying the symptom, scope, evidence, and attempted steps.

Validation

Confirming the change delivered the expected result. Rollback | Defined way to restore prior approved state.

Evidence and verification matrix

TERM	MISUSE TO AVOID	PROFESSIONAL USE	CHECK
Root cause	Guess labeled fact	Mark unconfirmed	PASS
Resolved	Action only	Attach successful retest	PASS
Escalated	No context	Supply evidence and impact	PASS

Reviewer handoff and quality assurance

Document: VOC-014 | Revision: 1.2 | Classification: public instructional example

Acceptance checklist

- ☐ Relevant user / system impact is defined without publishing confidential information.
- ☐ Expected outcomes are distinguished from the technician's actual observations.
- ☐ Every conclusion is supported by a specific test or appropriate evidence reference.
- ☐ Changes are authorized, reversible when appropriate, and documented.
- ☐ Closure includes verification, remaining risk, escalation, and reviewer disposition.
- ☐ Accessible language is used; screenshots and supporting files are safe for public release.

Evidence register (model references)

VOC-014 E-01 | Initial report or baseline. Synthetic exhibit reference, supplied to model documentation. Students replace with genuine, redacted records.

VOC-014 E-02 | Troubleshooting observations. Synthetic exhibit reference, supplied to model documentation. Students replace with genuine, redacted records.

VOC-014 E-03 | Change / review / authorization notes. Synthetic exhibit reference, supplied to model documentation. Students replace with genuine, redacted records.

VOC-014 E-04 | Final validation and user confirmation. Synthetic exhibit reference, supplied to model documentation. Students replace with genuine, redacted records.

Instructor review

What works: the record captures context, action, evidence and outcome. Before qualifying real student work, reviewers must inspect supporting artifacts and verify that any technical claim or metric is true.

Fictional review disposition: EXEMPLAR APPROVED FOR TEACHING ONLY.

Reflection and next action

The value of this artifact is not the final checkbox; it is the trace from an observed symptom through a defensible decision to validated results. A real student should explain one revision made after feedback and link the relevant commit.
