GitHub Collaboration Evidence

GIT-018

AUTHOR Alex Morgan (fictional) REVIEW Instructor demonstration STATUS Version history demonstrates improvement

Purpose and assessment context

A structured instructor-authored model for CIT-205. It illustrates how technical work becomes verifiable evidence. All incidents, measurements, approvals and names below are fabricated for teaching.

Repository purpose

Curated public evidence; fictional examples must not be confused with production change records.

Commit convention

Descriptive verbs and scope, such as 'Clarify DNS test outcomes in KB-017', rather than 'update'.

Revision story

Draft KB-017, receive reviewer note about ambiguous branch, revise decision logic, request second review, and accept completed example.

Professional conduct

Every pull request includes what changed, why, how it was validated, and whether sensitive data was reviewed.

Traceability

A README maps portfolio artifact titles to visible files and revisions. Proof links must point to actual commits when students publish real work.

Privacy & boundaries

Never place credentials, students' identifiers, private tickets, internal addresses, or proprietary materials into public commits.

Evidence and verification matrix

VERSION	CHANGE	REVIEW COMMENT	RESULT
v1.0	Initial procedure	Branch ambiguity	Needs revision
v1.1	Expected results added	Privacy scan	Ready for review
v1.2	Escalation clarified	Acceptance check	Approved model

Reviewer handoff and quality assurance

Document: GIT-018 | Revision: 1.2 | Classification: public instructional example

Acceptance checklist

- ☐ Relevant user / system impact is defined without publishing confidential information.
- ☐ Expected outcomes are distinguished from the technician's actual observations.
- ☐ Every conclusion is supported by a specific test or appropriate evidence reference.
- ☐ Changes are authorized, reversible when appropriate, and documented.
- ☐ Closure includes verification, remaining risk, escalation, and reviewer disposition.
- ☐ Accessible language is used; screenshots and supporting files are safe for public release.

Evidence register (model references)

GIT-018 E-01 | Initial report or baseline. Synthetic exhibit reference, supplied to model documentation. Students replace with genuine, redacted records.

GIT-018 E-02 | Troubleshooting observations. Synthetic exhibit reference, supplied to model documentation. Students replace with genuine, redacted records.

GIT-018 E-03 | Change / review / authorization notes. Synthetic exhibit reference, supplied to model documentation. Students replace with genuine, redacted records.

GIT-018 E-04 | Final validation and user confirmation. Synthetic exhibit reference, supplied to model documentation. Students replace with genuine, redacted records.

Instructor review

What works: the record captures context, action, evidence and outcome. Before qualifying real student work, reviewers must inspect supporting artifacts and verify that any technical claim or metric is true.

Fictional review disposition: EXEMPLAR APPROVED FOR TEACHING ONLY.

Reflection and next action

The value of this artifact is not the final checkbox; it is the trace from an observed symptom through a defensible decision to validated results. A real student should explain one revision made after feedback and link the relevant commit.
