Professional Reflection

LEARN → PRACTICE → OPERATE → QUALIFY

AUTHOR Alex Morgan (fictional) REVIEW Instructor demonstration STATUS Evidence-focused learning narrative

Purpose and assessment context

A structured instructor-authored model for CIT-205. It illustrates how technical work becomes verifiable evidence. All incidents, measurements, approvals and names below are fabricated for teaching.

LEARN

I learned to separate symptoms from cause, to record expected versus observed behavior, and to recognize when change authority matters.

PRACTICE

My first support records described the action but missed the test that confirmed success. A peer review revealed the evidence gap.

OPERATE

In a simulated support workflow I recorded the user's impact, gathered non-sensitive evidence, performed authorized checks, and closed only after verification.

QUALIFY

I can now explain a troubleshooting choice, show a reviewed KB procedure, walk through a redacted validation report, and describe how feedback improved the work.

BEFORE AND AFTER

Before: 'Changed DNS and fixed problem.' After: 'Gateway reachable, lookup failed, approved DNS restored, lookup and application both revalidated.'

NEXT TARGET

Improve accessibility for the KB reader, reduce ambiguity in decision trees, and collect stronger peer review evidence.

PORTFOLIO INTEGRITY

These are fictional model reflections. Real students must replace them with specific claims supported by their own work.

Evidence and verification matrix

STAGE	EVIDENCE	WHAT CHANGED	NEXT STEP
Learn	Vocabulary & KB	Define signals	More precise tests
Practice	Peer review	Better expected results	Iterate

Operate	Validation & tickets	User confirmation	Consistency
Qualify	Public portfolio	Traceable evidence	Interview demo

Reviewer handoff and quality assurance

Document: LEARN → PRACTICE → OPERATE → QUALIFY | Revision: 1.2 | Classification: public instructional example

Acceptance checklist

- ☐ Relevant user / system impact is defined without publishing confidential information.
- ☐ Expected outcomes are distinguished from the technician's actual observations.
- ☐ Every conclusion is supported by a specific test or appropriate evidence reference.
- ☐ Changes are authorized, reversible when appropriate, and documented.
- ☐ Closure includes verification, remaining risk, escalation, and reviewer disposition.
- ☐ Accessible language is used; screenshots and supporting files are safe for public release.

Evidence register (model references)

LEARN → PRACTICE → OPERATE → QUALIFY E-01 | Initial report or baseline. Synthetic exhibit reference, supplied to model documentation. Students replace with genuine, redacted records.

LEARN → PRACTICE → OPERATE → QUALIFY E-02 | Troubleshooting observations. Synthetic exhibit reference, supplied to model documentation. Students replace with genuine, redacted records.

LEARN → PRACTICE → OPERATE → QUALIFY E-03 | Change / review / authorization notes. Synthetic exhibit reference, supplied to model documentation. Students replace with genuine, redacted records.

LEARN → PRACTICE → OPERATE → QUALIFY E-04 | Final validation and user confirmation. Synthetic exhibit reference, supplied to model documentation. Students replace with genuine, redacted records.

Instructor review

What works: the record captures context, action, evidence and outcome. Before qualifying real student work, reviewers must inspect supporting artifacts and verify that any technical claim or metric is true.

Fictional review disposition: EXEMPLAR APPROVED FOR TEACHING ONLY.

Reflection and next action

The value of this artifact is not the final checkbox; it is the trace from an observed symptom through a defensible decision to validated results. A real student should explain one revision made after feedback and link the relevant commit.
