Server Validation Report

LAB-SRV-02 / SV-014

AUTHOR Alex Morgan (fictional) REVIEW Instructor demonstration STATUS Conditional pass; storage risk escalated

Purpose and assessment context

A structured instructor-authored model for CIT-205. It illustrates how technical work becomes verifiable evidence. All incidents, measurements, approvals and names below are fabricated for teaching.

Objective

Assess authorized training server health without unapproved changes to production services.

Scope

Read-only verification of service availability, logical volumes, scheduled patches, network interface, backup metadata, and open monitoring alerts.

Observed

Core application healthy; root volume 31% free; dedicated log volume 9% free against a 20% threshold.

Risk

Reduced log-volume capacity could interrupt logging and service continuity. A completed backup job is not equivalent to restore validation.

Change control

Opened DEMO-CHG-033 for storage remediation and DEMO-TKT-227 for patch planning. No log deletion or restart performed.

Handoff

Server remains operational with an open condition. Storage retest and restore exercise require separate approval.

Evidence and verification matrix

CONTROL	BASELINE	RESULT	STATUS
Service	Responsive	Responding	PASS
Root disk	>=20% free	31% free	PASS
Log disk	>=20% free	9% free	FLAG
Backup	Recent completed	Completed; restore untested	CONDITIONAL

Reviewer handoff and quality assurance

Document: LAB-SRV-02 / SV-014 | Revision: 1.2 | Classification: public instructional example

Acceptance checklist

- ☐ Relevant user / system impact is defined without publishing confidential information.
- ☐ Expected outcomes are distinguished from the technician's actual observations.
- ☐ Every conclusion is supported by a specific test or appropriate evidence reference.
- ☐ Changes are authorized, reversible when appropriate, and documented.
- ☐ Closure includes verification, remaining risk, escalation, and reviewer disposition.
- ☐ Accessible language is used; screenshots and supporting files are safe for public release.

Evidence register (model references)

LAB-SRV-02 / SV-014 E-01 | Initial report or baseline. Synthetic exhibit reference, supplied to model documentation. Students replace with genuine, redacted records.

LAB-SRV-02 / SV-014 E-02 | Troubleshooting observations. Synthetic exhibit reference, supplied to model documentation. Students replace with genuine, redacted records.

LAB-SRV-02 / SV-014 E-03 | Change / review / authorization notes. Synthetic exhibit reference, supplied to model documentation. Students replace with genuine, redacted records.

LAB-SRV-02 / SV-014 E-04 | Final validation and user confirmation. Synthetic exhibit reference, supplied to model documentation. Students replace with genuine, redacted records.

Instructor review

What works: the record captures context, action, evidence and outcome. Before qualifying real student work, reviewers must inspect supporting artifacts and verify that any technical claim or metric is true.

Fictional review disposition: EXEMPLAR APPROVED FOR TEACHING ONLY.

Reflection and next action

The value of this artifact is not the final checkbox; it is the trace from an observed symptom through a defensible decision to validated results. A real student should explain one revision made after feedback and link the relevant commit.
