Workstation Validation Report

ACE-NH-001 / WV-026

AUTHOR Alex Morgan (fictional) REVIEW Instructor demonstration STATUS Pass after approved remediation

Purpose and assessment context

A structured instructor-authored model for CIT-205. It illustrates how technical work becomes verifiable evidence. All incidents, measurements, approvals and names below are fabricated for teaching.

Scope

Validate authorized lab workstation ACE-NH-001 for boot, login, network, peripherals, endpoint protection, and browser access.

Baseline

Boot: 48 seconds (target under 90); sign-in: PASS; gateway ping: 4/4; endpoint protection: enabled; updates: no pending reboot.

Finding

DNS query for the approved training host timed out while the gateway remained reachable. Treat this as a DNS symptom, not a proven root cause.

Evidence

WV-026-E01 baseline checklist; E02 sanitized pre-change lookup; E03 change approval; E04 post-change validation. References are hypothetical.

Remediation

With approval CHG-DEMO-021, recorded prior adapter values, restored approved DNS configuration, and retained rollback notes.

Verification

Name lookup succeeded, test website loaded, and unaffected checks remained PASS. Technician: Alex Morgan; instructor review recorded as fictional.

Evidence and verification matrix

TEST	EXPECTED	OBSERVED	RESULT
Startup	Desktop within 90 sec	48 sec	PASS
Gateway	Successful response	4/4 replies	PASS
DNS lookup	Training host resolves	Timed out before change	FAIL → PASS
Browser	Training page renders	Rendered after retest	PASS

Reviewer handoff and quality assurance

Document: ACE-NH-001 / WV-026 | Revision: 1.2 | Classification: public instructional example

Acceptance checklist

- ☐ Relevant user / system impact is defined without publishing confidential information.
- ☐ Expected outcomes are distinguished from the technician's actual observations.
- ☐ Every conclusion is supported by a specific test or appropriate evidence reference.
- ☐ Changes are authorized, reversible when appropriate, and documented.
- ☐ Closure includes verification, remaining risk, escalation, and reviewer disposition.
- ☐ Accessible language is used; screenshots and supporting files are safe for public release.

Evidence register (model references)

ACE-NH-001 / WV-026 E-01 | Initial report or baseline. Synthetic exhibit reference, supplied to model documentation. Students replace with genuine, redacted records.

ACE-NH-001 / WV-026 E-02 | Troubleshooting observations. Synthetic exhibit reference, supplied to model documentation. Students replace with genuine, redacted records.

ACE-NH-001 / WV-026 E-03 | Change / review / authorization notes. Synthetic exhibit reference, supplied to model documentation. Students replace with genuine, redacted records.

ACE-NH-001 / WV-026 E-04 | Final validation and user confirmation. Synthetic exhibit reference, supplied to model documentation. Students replace with genuine, redacted records.

Instructor review

What works: the record captures context, action, evidence and outcome. Before qualifying real student work, reviewers must inspect supporting artifacts and verify that any technical claim or metric is true.

Fictional review disposition: EXEMPLAR APPROVED FOR TEACHING ONLY.

Reflection and next action

The value of this artifact is not the final checkbox; it is the trace from an observed symptom through a defensible decision to validated results. A real student should explain one revision made after feedback and link the relevant commit.
